PROFESSIONAL SUMMARY

Data Science student specializing in Supply Chain Management and Operations Analytics with a Google AI Professional Certification. Strong foundation in full-stack architecture, predictive modeling, and geospatial data. Proven track record of engineering enterprise-grade backend systems and integrating machine learning models, while concurrently pursuing an intensive Machine Learning professional certification.

EDUCATION & CERTIFICATIONS

University of Arkansas | Fayetteville, AR

Expected Graduation: May 2028

Bachelor of Science in Data Science | Concentration: Supply Chain Management, Operations Analytics

- **Coursework:** Database Management Systems, Supply Chain Analytics, Predictive Analytics, Logistics

Google AI Professional Certification | Coursera

Issued: March 2026

- Completed a 7-course program covering AI Fundamentals, Data Analysis, and App Building (utilizing Google AI Studio).
- Demonstrated fluency in prompting, evaluating outputs, and leveraging AI tools for real-world problem-solving.

TECHNICAL SKILLS

- **Languages & Frameworks:** Python, SQL, C#, ASP.NET, JavaScript, React, Astro, Node.js, HTML5/CSS3
- **Tools & Methodologies:** Tableau, Git/GitHub, Vercel, Predictive Modeling, Geospatial Analysis (Hex Binning, SQL Geometry), Web Scraping, Spatial Algorithms, System-Versioned Temporal Tables

TECHNICAL PROJECTS

Hog Bank Enterprise Core | C# ASP.NET, SQL Server, Relational Architecture

- Architected a full-stack, ACID-compliant internal banking portal prioritizing proactive database-level security and institutional regulatory compliance.
- Engineered API idempotency gateways to neutralize double-spending risks and utilized SQL POINT geometry to calculate spatial "Impossible Travel" velocities for automated account locks.
- Developed a dynamic "HogScore" underwriting engine and a live DFAST simulator to model macroeconomic portfolio stress and liquidity recovery.
- Optimized B2B payroll processing by implementing native SQL OPENJSON functionality for the high-speed batch ingestion of large corporate datasets.
- Integrated System-Versioned Temporal Tables for immutable audit histories and automated FinCEN Suspicious Activity Report (SAR) narrative generation using Graph Theory AML tracing.

MLB Prop Prediction Engine | React, Python, Predictive Modeling

- Architected a serverless predictive engine to identify mathematical inefficiencies and +EV in daily MLB prop markets.
- Engineered automated ingestion pipelines for live Statcast data, applying 45-day exponential time-decay models.
- Programmed spatial algorithms to dynamically adjust expectations based on real-time stadium park dimensions and thermodynamic factors.

Logistics-AI Dashboard | Python, Vercel, Machine Learning

- Deployed an AI-driven analytics dashboard designed to optimize operational efficiency and logistical supply chain routing.
- Managed full-cycle deployment from GitHub to Vercel, integrating live machine learning models into a highly responsive, user-facing web application.

EXPERIENCE

Netchex | Covington, LA

Sept 2023 - May 2024, Dec 2024 - Jan 2025

Production Associate

- Processed and managed sensitive client operational data for a major regional payroll processing firm.
- Ensured strict compliance with rigid operational deadlines while prioritizing absolute data accuracy and process execution.
